

FIX MOTOR CONTROL

MOTOR DIGI PLUS

Motor controller

Motor Digi Plus can be adapted to different settings for motor control, based on the requirements of any installation.

It can be configured to control motors without speed control (using contactors) or with speed control (using variable speed drives), with control of position (absolute or incremental encoders) or without it, and with load control or without it (using load cells).

It has an LCD display provided with 2 rows and 16 columns. There are 4 buttons for programming all motor control parameters.

A Motor Digi Plus must be installed for each motor that is controlled.

It includes an emergency button to block the motor in case of being necessary.

Reference: 03000071

Dimensions 430x180x199 mm

Exterior finish Black colour

Power supply Three-phase 380V 50Hz

Outputs Three-phase 380V 50Hz motor

Other characteristics:

Input connector Sub-D 15 pins (for encoder, emergency and end of course switch)

Interface communication through CAN

Connector RJ-45
